

Perform Scanning Module by using Nmap tool (Download from Internet) and scan kalilinux and Windows 7 machine and find the open/closed ports and services running on machine

Hacker Machine : Windows 10

Victim machine : Kali Linux and Windows 7

Kali:

Enter the IP address of target in the target section and select the type of scan you want to run and click on scan and then if you click on ports/ hosts you will see the open/close ports and if you click on services you will see the type of services running on the pc

Windows 7:

Enter the target IP in the target section and select the type of scan you want to run and click on scan. In this case I ran intense all TCP ports

In the below figure I again ran a scan which is a quick scan in the you can see the open ports on the win7 pc and the services running on it
